

F1
cont. substance phases of the formulation are coherent, and the formulation provides controlled-release properties when directly compressed.

- F2
22. (Amended) Formulation in the form of a matrix material-containing compound comprising:
- an active substance phase comprising at least one active substance; and
 - a matrix material phase comprising at least one polymer or lipid, wherein when said polymer comprises cellulose the portion of the matrix material phase of the formulation is 70 to 98% by weight, and wherein the formulation is in the form of a freely flowable powder of spray-dried particles such that the matrix material phase is incoherent and the active substance phase of the formulation is coherent, and the formulation provides controlled-release properties when directly compressed.

31. Formulation according to any one of claims 1, 2 and 19-22, wherein the content of the matrix material phase of the formulation is 1 to 98 % by weight.
32. Formulation according to any one of claims 1, 2 and 19-22, wherein the content of the matrix material phase of the formulation is 10 to 95 % by weight.
33. Formulation according to any one of claims 1, 2 and 19-22, wherein the content of the matrix material phase of the formulation is more than 15 % and not more than 90 % by weight.
34. Formulation according to any one of claims 1, 2 and 19-22, wherein the content of the matrix material phase of the formulation is 40 to 70 % by weight.
35. Formulation according to any one of claims 1, 2 and 19-22, wherein the matrix material phase comprises at least one selected from the group consisting of polyacrylate, polymethacrylate, naturally occurring, semi-synthetic and synthetic triglycerides or mixtures thereof, mono- and diglycerides by

EXPLANATION OF AMENDMENT:

The claims have been amended as shown by [deletions] and insertions.

2. (Amended) Formulation in the form of a matrix material-containing compound comprising:
- an excipient phase comprising at least one excipient;
 - an active substance phase comprising at least one active substance;
 - and
 - a matrix material phase comprising at least one polymer or lipid, wherein [in case of] when the matrix material phase comprises cellulose the portion of the matrix material phase of the formulation is 70 to 98% by weight, and wherein the formulation is in the form of a freely flowable powder of spray-dried particles such that the matrix material phase is incoherent and the excipient and active substance phases of the formulation are coherent, and the formulation provides controlled-release properties when directly compressed.
22. (Amended) Formulation in the form of a matrix material-containing compound comprising:
- an active substance phase comprising at least one active substance;
 - and
 - a matrix material phase comprising at least one polymer or lipid, wherein [in case of] when said polymer comprises cellulose the portion of the matrix material phase of the formulation is 70 to 98% by weight, and wherein the formulation is in the form of a freely flowable powder of spray-dried particles such that the matrix material phase is incoherent and the active substance phase of the formulation is coherent, and the formulation provides controlled-release properties when directly compressed.
